

# Corn Yield Contest Harvest Report Form

If using Excel file, simply fill-in the yellow fields. Formulas will be completed for you.

Name: \_\_\_\_\_ Phone: \_\_\_\_\_

Address: \_\_\_\_\_ Email: \_\_\_\_\_

City, State Zip: \_\_\_\_\_

County in which field is Located: \_\_\_\_\_ Township: \_\_\_\_\_

Section Number: \_\_\_\_\_ Seed Brand: \_\_\_\_\_

Is Field Irrigated? Yes No

Did you use a cover crop for this field? Yes No

Length of Rows Harvested: **0**

(If all rows are not the same length, attach a sketch showing how the average length of rows was calculated.)

How was measuring done? Measuring Tape Measuring Wheel

Width of Harvested Area **0** (Multiply number of rows by distance between rows and divide by 12 to get width harvested in feet.)

Number of Rows Harvested: **0**

Distance Between Rows (inches): **0**

Area Harvested (ft<sup>2</sup>): **0** (Length x Width)

Length: **0** Width: **0**

Acres: **0** (Square feet divided by 43,560)

Must be at least 1.25 acres to enter.

Weight of Corn Harvested from Plot:

Total Loaded Weight: **0** Empty Truck Weight: **0**

Net Weight: **0** Moisture of Corn Harvested: **0.0%**

(Or weight from weigh wagon, if used)

Dry Bushels: (Subtract moisture percent from 100% to get percent dry matter)

Moisture Percent: **0.0%** Percent Dry Matter: **100.0%**

Percent Dry Matter: **100.0%** Net Weight: **0**

Net Dry Bushels: **0** {{(Dry Matter x Net Weight)/47.332}  
47.32 = Lbs of Dry matter in 56 lb bushel

**Net Bushels Per Acre: #DIV/0!** Net Dry Bushels/Acres Harvested

To the best of my knowledge the figures reported above are accurate:

Signature of Entrant \_\_\_\_\_ Date \_\_\_\_\_ Witness Signature \_\_\_\_\_ Date \_\_\_\_\_

Witness is: (select one)  
County Agent  
Crop Consultant  
Self-employed
